

BUILD LOG · CLAUDE FABLE 5

I'm building my entire portfolio site with AI.

75 archived articles. Custom animations. SEO.
Performance. One model, one repo.

THE BACKSTORY

Other models kept letting me down.

- My name-signature animation? Tried it with Framer Motion before — output was broken.
- My email + links hardcoded in 7 different places.
- Duplicated layouts silently drifting apart.

THE MOMENT IT CLICKED

The animation I couldn't get right? One go.

My NEA logo now hand-writes itself — like a signal.

- 9 pen strokes drawing in real writing order
- Replays when you hover the logo
- Plays as a 2s splash intro, once per session

NOT JUST PAGES — PIPELINES

It built me a content archive engine.

75 articles archived: AltexSoft, Prismic, Smashing Mag

- Scrapes my published client articles (FireCrawl)
- Per-client cleanup: strips promos, navs, widgets
- Rebuilds tables, FAQs + videos from page data

PERFORMANCE

It optimizes without being asked twice.

- Found + removed 5 dead dependencies
- Trimmed server payloads (no over-serialization)
- Scroll bar re-done: zero re-renders while scrolling
- Honest image size hints — no more 2x downloads

CODE HYGIENE

It fixed what previous models hardcoded.

- Email, LinkedIn, name → one SITE config, referenced everywhere

- Two copy-pasted article layouts → one shared layout for blog + portfolio

- Scattered animation CSS → one animations.css

SEO — MY HOME TURF

And it speaks fluent SEO.

- JSON-LD: Person, Article, Breadcrumbs, ProfilePage
- Generated OG images for all 75 articles
- Canonicals pointing to original publications

THE SCOREBOARD

Where the build stands today.

75

client articles archived

249

static pages generated
